

## ABSTRACT

An on-line invention disclosure system includes a user computer (14) and a web server (12) having an identification subsystem (30). A database (18) is coupled to the server (12). The server  
5 provides user screens to the user to prompt users to provide user information to the server. The server receives disclosure information from the users and stores information in the database (18) and prompts the users to provide a password. Upon the proper  
10 password, access to the disclosure is granted. Before granting a docket number, approval is received from each of the inventors.
